**COMMUNITIES KEY**

- CORAL REEF**  
The coral reef is a fringing reef that lies close to the shore, following the coastline.
- INTERTIDAL**  
The intertidal area is the shallow part of the reef, usually less than a metre deep.
- MANGROVES**  
Mangrove trees are specially adapted to the salt water, and line much of Exmouth Gulf.
- SEAGRASS**  
Seagrass meadows provide a habitat and food source for many marine creatures, including dugongs.
- FOSSIL REEF**  
The Cape Range area was once an underwater coral reef.
- KARST**  
Over time, rainwater dissolved the limestone rocks to create deep caverns and hollows.
